

International Conference

THE MICROBIOME THROUGHOUT LIFE

Translating new science into clinical practice

19 - 21 March 2026 – Belgrade, Serbia

FRANCESCO ASNICAR

Dr. Francesco Asnicar is a tenure-track researcher at the Department CIBIO at the University of Trento, Italy. He received his Ph.D. in Computer Science and has a strong background in computational biology, focusing on developing novel methods for analyzing microbial communities. His research investigates the intricate interplay between diet and the human gut microbiome.

Dr. Asnicar's expertise lies in computational phylogenetics, statistical analysis, and machine learning, which he leverages to explore the complex relationships between dietary patterns and metabolic responses mediated by the gut microbiome.
