

International Conference

THE MICROBIOME THROUGHOUT LIFE

Translating new science into clinical practice

19 - 21 March 2026 – Belgrade, Serbia

MANI ARUMUGAM

Mani Arumugam is a Group Leader at the University of Copenhagen, where he leads a research team focused on decoding the human microbiome through data science. His work bridges computer science and biology, with a specific focus on microbiome therapeutics aimed at improving human health.

His major research directions include the integration of multi-omics host-microbiome data and the application of AI and machine learning to understand microbial dynamics and antimicrobial resistance (AMR). Mani is always open to connecting with experienced data scientists interested in exploring high-dimensional, heterogeneous data.
