

International Conference

THE MICROBIOME THROUGHOUT LIFE

Translating new science into clinical practice

19 - 21 March 2026 – Belgrade, Serbia

NICOLA SEGATA

Nicola Segata, Ph.D., is Professor and Principal Investigator in the CIBIO Department at the University of Trento (Italy) and Principal Investigator at the European Institute of Oncology in Milan (Italy). His lab (<http://segatalab.cibio.unitn.it/>) comprises more than 25 researchers and employs experimental metagenomic tools and novel computational approaches to study the diversity of the microbiome across conditions and populations and its role in human diseases. The projects in his lab bring together computer scientists, microbiologists, statisticians, and clinicians and are focused on profiling microbiomes with strain-level resolution and on the meta-analysis of very large sets of metagenomes with novel computational tools. The lab aims at further understanding the human microbiome and translating the new knowledge into clinically relevant tools.
