

International Conference

THE MICROBIOME THROUGHOUT LIFE

Translating new science into clinical practice

19 - 21 March 2026 – Belgrade, Serbia

RANDI J. BERTELSEN

Randi J. Bertelsen is Professor of Epidemiology at the University of Bergen and affiliated with the Oral Health Center of Expertise in Western Norway, Bergen, Norway. Professor Bertelsen's research focuses on periodontal disease status and systemic inflammatory conditions, with a particular interest in the microbiome and lungs. Her research group is currently exploring whether removing oral inflammatory bacteria improves lung function in periodontitis patients. With a background from biology and evolutionary ecology she has also a particular interest in ecological niches of microbiome and resistome in environmental samples such as indoor air, outdoor air, and wastewater as well as in humans using data from several population based multicenter studies.
