

International Conference

THE MICROBIOME THROUGHOUT LIFE

Translating new science into clinical practice

19 - 21 March 2026 – Belgrade, Serbia

RICCARDO VANINI

Riccardo Vanini is a second-year PhD student in the Biomolecular Sciences program at the Department of Cellular, Computational, and Integrative Biology (CIBIO) of the University of Trento (Italy), under the supervision of Prof. Enrico Domenici (Laboratory of Neurogenomic Biomarkers) and Dr. Francesco Asnicar (Laboratory of Human Microbiome and Computational Phylogenomics).

His research investigates the influence of host genetics on human microbiome composition and functions, at different body sites. Moreover, he is also involved in projects exploring the role of the microbiome in disease development. He aims to identify novel interactions between host genetics and human microbiome, to better understand their combined impact on human health and disease.
