

International Conference

THE MICROBIOME THROUGHOUT LIFE

Translating new science into clinical practice

19 - 21 March 2026 – Belgrade, Serbia

VALERIIA IVANOVA

Valeriia Ivanova is a PhD student in Bioinformatics at the Faculty of Life Sciences, Bar-Ilan University, in Prof. Nissan Yissachar's lab. Her research focuses on host-microbiome interactions across the lifespan, with particular emphasis on early life and disease, aiming to understand how microbial composition and function shape host biology. She employs multi-omics approaches together with statistical and machine-learning methods to characterize microbial functions associated with host health and to uncover complex host-microbiome relationships.
